PROBLEM & SOLUTION

A daily food gap, solved by subscription

THE PROBLEM

- **Restaurant apps —** Expensive & inconsistent for daily use
- **Fast food —** Cheap, but poor nutrition & satiety
- **Local tiffins —** Unreliable timing, no transparency
- **Cooking at home —** Needs time, kitchen access, skill

OUR SOLUTION

- **Subscription-first —** Weekly/monthly plans; pause, skip, resume
- **Consistent, transparent menu —** Fixed weekly menu with nutrition info
- **WhatsApp + app ordering —** Zero-friction, no forced app download
- **Hub kitchens & institutions —** Fixed routes; PG/hostel/college tie-ups

The market remains fragmented, with limited options combining affordability, daily subscriptions, nutrition transparency and institutional distribution.

MARKET & COMPETITION

A large market we're built to win

₹7 Tn

India food-services, FY25

₹0.79 Tn

Online food delivery, FY25

₹1.7–2.2 Tn

Delivery mkt by FY30

Dimension	NutriBox	Aggregators	Local Tiffins	Cloud Kitchens
Price, daily use	**Low–Medium**	High	Low	Medium–High
Consistency	**High**	Medium	Low	Medium–High
Institutional tie-ups	**Yes — core GTM**	No	No	Limited

SOM (5-yr target): 8–10 city clusters, ~20,000 active subscribers + B2B accounts. Moat: institutional distribution, hub-kitchen route density, trusted subscription brand.

BUSINESS MODEL

Four revenue streams Built Around Recurring Meals

D2C Subscriptions

~85% of Yr-1 revenue

B2B Corporate Contracts

From Year 2

Premium Meal Tiers

From Year 2

Partnership Fees

Selective

Pricing

Plan	Included	Price/Month	Price/Meal
Single-meal	1/day × 28 days	**₹2,800**	₹100
Double-meal	2/day × 28 days	**₹5,200**	₹92.86
Corporate lunch	22 days/employee	**₹2,400**	₹109.09

Where a ₹100 meal goes:

₹33

Contribution per meal (33%)

UNIT ECONOMICS

Strong economics at the subscriber level

₹924	₹400	₹5,544	~13.9:1	~13 days
Monthly contribution / subscriber	Customer acquisition cost (CAC)	Lifetime value (LTV)	LTV : CAC ratio	CAC payback period

Initial economics reflect dense PG/college clusters; CAC is expected to increase as geographic coverage expands.

Go-to-Market

Ph.1 (M1–6): Single-city beachhead

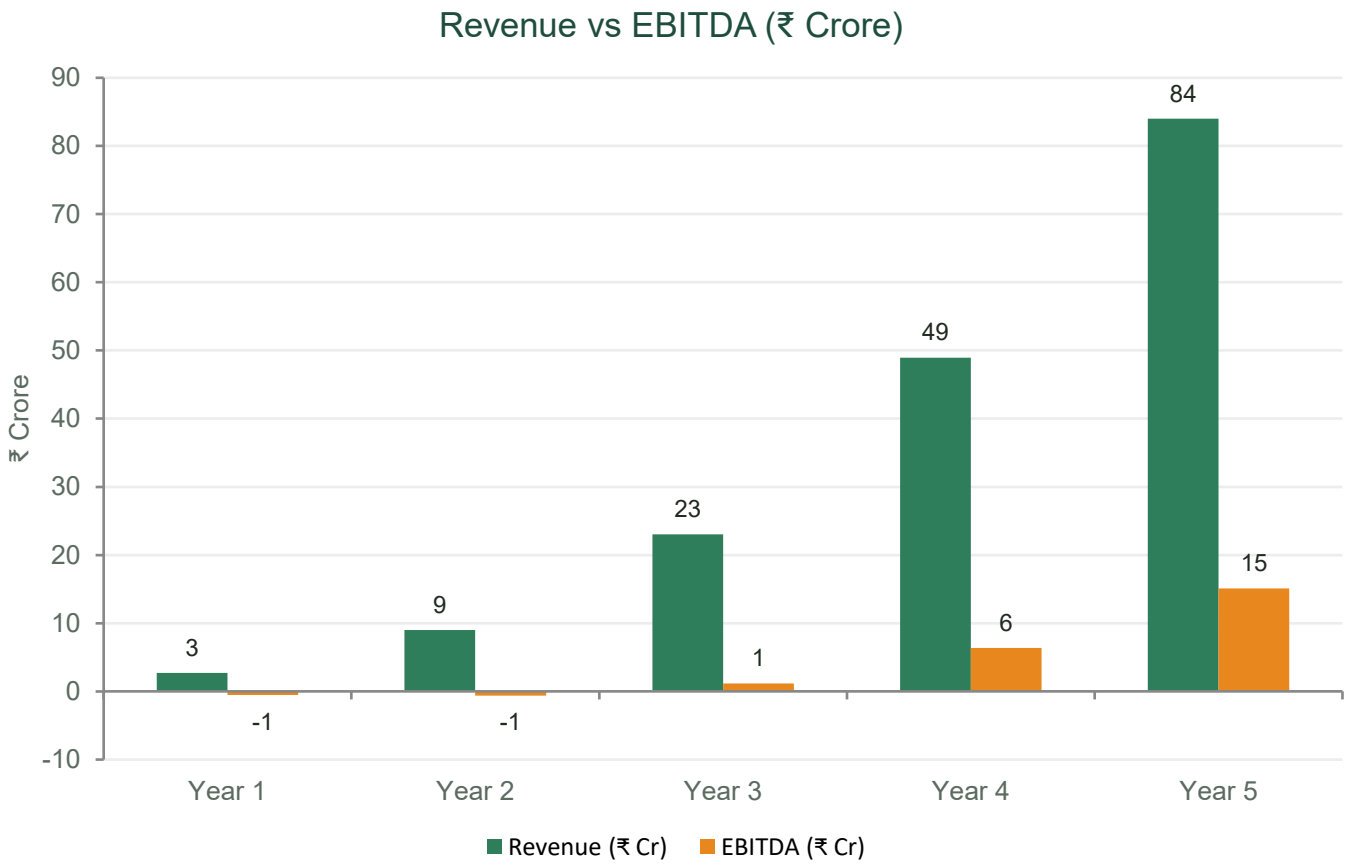

Ph.2 (M7–12): Density & retention

Ph.3 (Yr2): Second city + B2B pilot

Ph.4 (Yr3–5): Multi-city + B2B scale

FINANCIAL PROJECTIONS

Path to profitability by Year 3

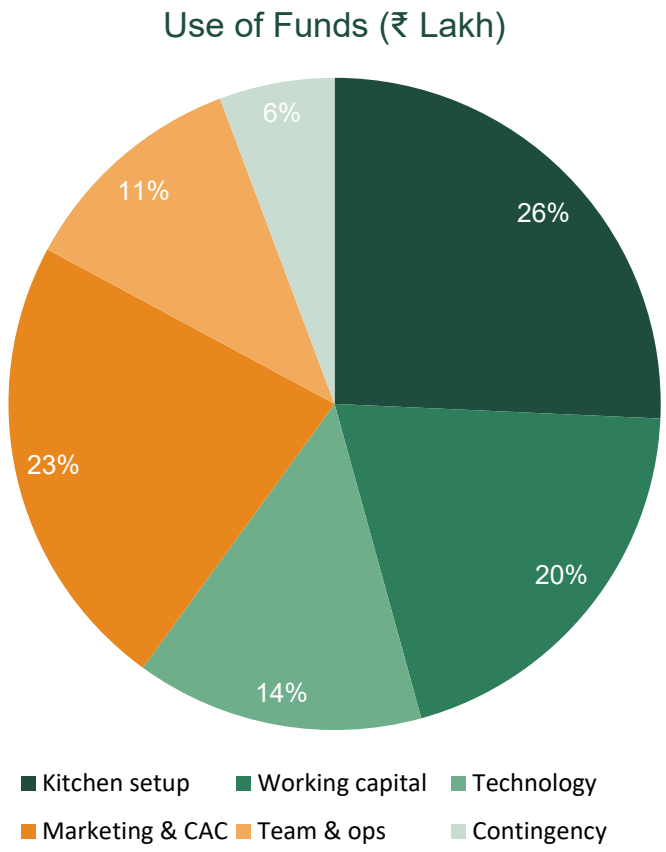

Metric	Yr 1	Yr 2	Yr 3	Yr 4	Yr 5
Subscribers (avg)	800	2.5K	6K	12K	20K
Gross margin	35%	38%	40%	41%	42%
EBITDA margin	(20%)	(7%)	5%	13%	18%

Breakeven in Year 3, driven by rising ARPU, COGS efficiency and operating leverage.

THE ASK

₹1.75 crore to prove the model

Kitchen setup & equipment	**₹45L**	26%
Working capital	**₹35L**	20%
Technology	**₹25L**	14%
Marketing & CAC	**₹40L**	23%
Team & operations	**₹20L**	11%
Contingency	**₹10L**	6%
Total	**₹175L**	

18-month runway to reach single-city operating breakeven and de-risk the model for a Series A.

VALUATION & RETURNS

What's on the table for investors

Valuation logic

- Year-1 exit run-rate revenue: ~₹3.5 Cr (annualised)
- Applied seed-stage multiple: ~3.67x revenue
- Pre-money ≈ ₹12.83 Cr → Post-money ₹14.58 Cr
- Investor equity for ₹1.75 Cr investment: ~12%

Illustrative Year-5 exit (base case)

₹84 Cr revenue × 3.0x multiple ≈ ₹252 Cr enterprise value

	Downside	Base	Upside
Yr-5 revenue	₹35 Cr	**₹84 Cr**	₹130 Cr
Exit multiple	1.5x	**3.0x**	3.5x
Exit EV	₹52.5 Cr	**₹252 Cr**	₹455 Cr
Investor MOIC	~3.6x	**~17.3x**	~31.2x

Even the downside scenario returns approximately the investor's capital — the hub-and-route model keeps fixed costs low.

Assumes investor dilution from ~12% by exit across future funding rounds — a conservative, standard assumption.

SCALING THE MODEL

Strategic synergies that compound value

Premium meal tiers

Higher ARPU & margin

B2B corporate contracts

Lower blended CAC

Grocery/snack cross-sell

Bigger basket, same route

Institutional mess contracts

Near-zero marginal CAC

Kitchen-as-a-service

Monetise spare capacity

Franchise city expansion

Capital-light scale

PG & College Partnerships

Lower CAC +higher customer density

Selective acquisitions

Instant city entry

Route-optimisation tech

Lower delivery cost/meal

RISKS

What could go wrong — and how we manage it

Subscriber churn (semester cycles)

Diversify into corporate & institutional contracts to smooth seasonality.

Rising input costs

Bulk procurement contracts and flexible menu substitution.

Intense competition

Institutional lock-in contracts aggregators cannot match.

Food safety at scale

Standardised hub-kitchen SOPs and FSSAI compliance.

Last-mile delivery reliability

Fixed time-slot routing and route-optimisation technology.

Single-city concentration (Yr 1)

Capital-light second-city playbook once city 1 is proven.

Join us in fixing how India eats away from home.

We're raising ₹1.75 crore at a ₹7.00 crore pre-money valuation to prove the single-city model and unlock a multi-city, multi-revenue-stream growth path.
